## DESIGN IN THE TWIN CITIES

# INSPIRATION FOUND

A perfect blend of passion and process brings beauty, honesty, and sustainability to every InUnison Design project.

A long-established and multi-award-winning leader in the Twin Cities commercial and residential design community, Christine Frisk, the dynamic principal and founder of InUnison Design, continues to raise the bar.

"I love bringing a team together to create, problem solve, and elevate any project to something beyond anything we imagined," says Frisk, who finds inspiration in each new project and the creative collaboration that inevitably ensues.

One recent example: a jaw-dropping home inspired by the stone houses of Scandinavia. As with every project, Frisk and the InUnison team brought their signature passion-meets-process ethos and collaborative spirit to its incarnation. Starting with an in-depth discovery phase to learn more about the clients, their needs, and their vision, the team progressed to a detailed design plan developed in close concert with the clients, architect, and construction crew.

The resulting home features an architecturally stunning play of stone, wood, and steel throughout its exterior and interior while remaining the warm, inviting family home the clients desired. Floor-to-ceiling windows integrate seamlessly with the outdoor living area, and a perfectly formed kitchen with a concealed larder area

elevates the open-concept space to a uniquely uncluttered and streamlined achievement.

Frisk credits her years of experience in commercial design with bringing innovative and sustainable elements to her residential work. But it is a tripartite goal of beauty, honesty, and sustainability that forms the foundation of her design philosophy.

"We strive for integrity, beauty, and sustainability both aesthetically and in our process," she says. "Finding that balance while making dreams happen is a creative effort that is always rewarding."
